PLATINUM-GROUP METALS IN APRIL 2004

A key factor in the demand for platinum and palladium is their use for auto catalysts. The choice between the two usually depends on the relative price of the metals, but while price is important, the two metals are not interchangeable. A switch from one to the other cannot readily be made in the short term given the long lead time between design and certification of an emissions system and the launch of the vehicle model to which it is fitted. Technical factors, which preclude the use of palladium in auto catalysts for diesel engines, also play a role in the choice. The increased market penetration of diesel cars in recent years has therefore been a benefit to platinum demand. On April 2, 2004, n.v. Umicore s.a., announced the introduction of technology that reportedly will enable the use of palladium as a catalyst in diesel emission systems for passenger cars. The new diesel oxidation catalyst technology may enable the replacement of about 25 % of current platinum loadings by palladium, significantly lowering demand for platinum. The actual level of substitution would require about 1.5 times the amount of palladium to achieve the same results of platinum. The new palladium auto catalysts are still in the early stages of development, with results not expected for a number of years

and will not have an immediate effect on platinum demand. According to Anglo Platinum Ltd., this development will have no impact on its plans to expand platinum production. Anglo Platinum produced 68,400 kilograms (kg) of platinum and 35,800 kg of palladium in 2003 (Anglo Platinum Ltd., 2004, oral commun., May 28, 2004; n.v. Umicore s.a., 2004).

On May 5, 2004, the Defense National Stockpile Center (DNSC) announced the aggregated April 2004 platinum-group metals (PGM) sales results under the Basic Ordering Agreement DLA-PGM-002. During April, DNSC sold 93.3 kg of palladium for an overall value of approximately \$950,000 to A-1 Specialized Services & Supplies, Inc., Croydon, PA (Defense National Stockpile Center, 2004).
